I am a second-year Data Engineering and Analysis student passionate about solving complex problems using analytical tools and artificial intelligence technologies. I have experience in programming, statistical modeling, and implementing machine learning algorithms. I am currently seeking projects and professional challenges that will allow me to develop my skills in data analysis and AI.

Skills

Programming Languages: Python, R, Java, SQL, C++, Lua (Redis)

Libraries: NumPy, Pandas, scikit-learn, TensorFlow, PyTorch, Matplotlib, Seaborn, tidyverse, dplyr, plotly, caret, tidymodels, mlr3

Machine Learning & AI: Reinforcement learning, supervised and unsupervised learning, deep learning, Natural Language Processing (NLP)

Tools: Git, Jupyter Notebook, Maven

Education

Lublin University of Technology – Data Engineering and Analysis (B.Sc., 2023 – Present)

Experience

Advanced Machine Learning (AML):

01.09.2024 - 28.02.2025

Data Analysis & Machine Learning: data preparation for statistical analysis, data cleaning, feature selection, statistical testing, anomaly detection, application of traditional machine learning algorithms for regression and classification tasks.

Natural Language Processing (NLP): text data preprocessing, building transformer-based models for text classification, transfer learning, and designing information retrieval systems based on RAG methods.
